Take three numbers as input from user and print the max number. The numbers can be very large.

Input: 6 4 5

Output: 6

Input: 5 6 4

Output: 6

Input: 1000000000000   82349798134   23894789334

Output: 1000000000000

Take 'n' as input from user and print 1 to n (space separated).

Input: 10

Output: 1 2 3 4 5 6 7 8 9 10

Take 'n' as input from user and print n to 1 using while (space separated).

Input: 10

Output: 10 9 8 7 6 5 4 3 2 1

Take a number 'n' as input from user.

Then take 'n' numbers as input and print it if it is even.

Input:

8

2 3 4 6 7 8 0 5

Output: 2 4 6 8 0

Take a string as input from user.

And Calculate its length without using strlen().

Constraint: String size <= 1000

Input: RECursion-NITDurgapur

Output: 21

Input: NIT Durgapur

Input: I can take out a string's length!!!

What will be the output here?
